

The Flexa 912 from Morbidelli

Flexa by name, flexible by nature. The Flexa 912 is ideal for manufacturers looking for more versatility and high output from a throughfeed drilling platform. The drilling and boring machine can be stand alone or part of an integrated line. Featuring a quick release chuck system, 300 independent drill bits and newly designed heads, the machine reduces tool changeover time to less than 20 seconds. Operations such as vertical and horizontal boring and insertion of dowels can be carried out on single panels or two panels simultaneously. Flexa 912 is suitable for small or large companies as it can handle batches of 20 to 500 pieces. It can also handle bespoke panels and components.
